“MAIN LABOUR FORCE INDICATORS BY PROVINCE, 2014”

PRESS RELEASE

Press Release of “Main Labour Force Indicators by Province, 2014” which was included in the National Data Release Calendar dated on July 1, 2015 at 10:00 o'clock will not be released on specified date.

Main labour force indicators at provincial level estimated by small area estimation methods either using the original labour force survey data or using external administrative variables (province population and other demographic indicators, data of Social Security Institution and Turkish Employment Office, etc.) determined by econometric studies.

The main labour force indicators at provincial level for 2014 could not be estimated statistically significant because of transition to the continuous labour force survey covering every weeks of the year as reference period (52 weeks) and also the change on urban-rural distinction since 2014. So, it has been decided not to publish related press release considering the misleading results for decision makers.

Announced to the public with respect.
