### **ANNOUNCEMENT**

In the indices published within the scope of Short Term Business Statistics in our Institution, generally fixed base year Laspeyres Calculation Method is used. In the scope of harmonization to the European Union, studies in Short Term Business Statistics on updating the base year, using the chain volume indices and using administrative records as data source are still going on.

In this context, the micro data of the Revenue Administration and the Social Security Institution have been studied since 2016 and it has been decided to use these records in the calculation of 2015 base year indices. Thus, more comprehensive data sets will be produced, response burden will be reduced, and short-term, annual indicators, and GDP series will be coherent. The indices to be produced according to administrative records with 2015 base year will be shared with the public with the press release of the first month / period of the year 2018 at the latest. In this scope, the indices planned to be updated are;

- Industrial Production Index,
- Industrial Turnover Index,
- Retail Sales Indices,
- Construction Turnover and Production Indices,
- Industrial Labor Input Indices,
- Trade and Services Indices,
- Construction Labor Input Indices,
- Labor Cost Indices,

Announced to the public with respect.
